

HELP US SAVE OUR INDIGENOUS FISH SPECIES

Do your part by acting responsibly when fishing in our lakes and rivers.

Be legally responsible:

Obtain your angling licence.

Use the correct fishing method.

Follow your quotas.

Fish in a designated area.

Report illegal fishing.

Apply for a angling licence online.

56% of indigenous fish are threatened.

Please return indigenous fish (e.g. Clanwilliam yellowfish, sawfin and whitefish) to the water. These fish are at threat of extinction as they've been displaced from much of their former ranges by alien fish, such as the two black bass species, carp and sharptooth catfish. Threats to instream habitat, such as water abstraction and pollution, has also contributed to the decline of indigenous fish species."
